ABSTRACT

Managing the energy conservation has become a most important phenomenon in Intention to Conserve Energy (ICE). Majority of the organizations in Sri Lanka are experiencing employees' performance as an effective variable where it represents dimensions that employees endure. Most of the individual's willingness to save energy in workplaces is crucial to reduce energy consumption and carbon emissions. This state of performance is created through the high support from relevant parties and some conditions where a person does succeed in balancing his or her roles at ICE. Also there is a gap in literature to reveal the relationship of attitude towards energy saving (AES), subjective norm (SN), perceived behaviour control (PBC), personal moral norm (PMN) and descriptive norm (DN) on ICE among the employees especially in selected organizations.

Thus, the present study was conducted with the aim of investigating the attitude towards energy saving (AES), subjective norm (SN), perceived behaviour control (PBC), personal moral norm (PMN) and descriptive norm (DN) on Intention to Conserve Energy (ICE) of organization employees at Manmunai North Divisional Secretariat Organizations, Batticaloa. The study is mainly considering the primary data. The data were collected through a self-administrated survey method with the use of closed structured questionnaire from 200 respondents of selected organizations' employees. The study used univariate, bivariate and linear regression analysis techniques in order to analyze the data and find the results of the study objectives. The findings of the study revealed that the AES and PBC have a strong positive relationship with ICE and SN, PMN and DN have a weak positive relationship with ICE. Consequently, AES and PBC control are significantly contributing to determine the ICE and PMN and DN are insignificantly contributed to determine the ICE. Moreover, the high levels of AES, SN, PBC, PMN and DN among the respondents lead to higher level of ICE among the selected organization employees in Batticaloa. The findings of the study have various implications for other organizations.

Keywords: *Attitude towards Energy, Subjective Norm, Perceived Behaviour Control, Personal Moral Norm, Descriptive Norm and Intention to Conserve Energy.*

DISCUSSION OF FINDINGS	78
6.1 Introduction.....	78
6.2 Respondents Profile	78
6.2.1 Gender of Respondents	78
6.2.2 Age of Respondents	78
6.2.3 Education level of Respondents.....	79
6.2.4 Occupations of Respondents.....	79
6.2.5 Monthly Income Level of Respondents	79
6.3 Discussion of Research Information	79
6.3.1 Discussion -Objective One	80
6.3.1.1 Level of Attitude towards energy saving	80
6.3.1.2 Level of Subjective norm.....	80
6.3.1.3 Level of Perceived behaviour control	81
6.3.1.4 Level of Personal moral norm.....	81
6.3.1.5 Level of Descriptive norm	81
6.3.1.6 Level of Intention to Conserve Energy	82
6.3.2 Discussion –Objective Two	82
6.3.2.1 Relationship between Attitude towards energy saving and Intention to Conserve Energy	82
6.3.2.2 Relationship between Subjective norm and Intention to Conserve Energy.....	83
6.3.2.3 Relationship between perceived behaviour control and Intention to Conserve Energy	83
6.3.2.4 Relationship between personal moral norm and Intention to Conserve Energy	83
6.3.2.5 Relationship between Descriptive norm and Intention to Conserve Energy	84
6.3.3 Discussion -Objective Three.....	84
6.3.3.1 Simple regression analysis for attitude towards energy saving and Intention to Conserve Energy.....	84
6.3.3.2 Simple regression analysis for subjective norm and Intention to Conserve Energy.....	85

6.3.3.3 Regression analysis for Perceived behaviour control and Intention to Conserve Energy.....	86
6.3.3.4 Regression analysis for personal moral norm and Intention to Conserve Energy.....	87
6.3.3.5 Regression analysis for descriptive norm and Intention to Conserve Energy. .	88
6.3.3.6 Multiple linear Regression analyses for attitude towards energy saving, subjective norm, perceived behaviour control, personal moral norm and descriptive norm on Intention to Conserve Energy.....	88
6.3.3.7 Testing Hypothesis.....	90
6.3.4 Objective Four	91
6.3.4.1 Gender.....	91
6.3.4.2 Age level	92
6.3.4.3 Education Level	92
6.3.4.4 Monthly income Level.....	92
