Abstract:

Suitable soil types, water availability, better infrastructures and marketing facilities have been major factors determining agricultural productivity in any region of world. Attempts to identify the most suitable areas for agriculture will definitely leads to increase overall agricultural productivity in the Batticaloa district which is situated in the Eastern region of Sri Lanka. Decision-making is the important process in this manner. In view of this a spatial computer model, called **BATTI-LAND** was developed for identifying agricultural potential area with special reference and application to Batticaloa district. Furthermore, a software package was also developed as an application of Microsoft Access with Visual Basic interface referred to as Agricultural Information System for Batticaloa (**AISB**). The package contains various information on fresh water availability, infrastructures, and land cover, and allows for selection/identification of suitable areas through the user interface. This allows the user to identify an area that is suitable for a particular crop to be grown with his preference. The developed model has the potential to show the suitable Batticaloa maps of user wish. The overall goal of this project was the cost effective integration of computer-based Decision Support Systems using easily available software platforms (such as MS Excel) for identifying agricultural potential area in Batticaloa district.

Key words: Geographic Information System, Decision Support System, Overlaying, Buffering, Spatial modeling.

ABSTRACT	I
ACKNOWLEDGEMENTS	II
CONTENTS	III
LIST OF FIGURES	VI
LIST OF TABLE	VII

CONTENTS

CHAPTER 1: INTRODUCTION	1
1.1. Needs for identifying agricultural potential area in Batticaloa district	2
1.2. Importance of Decision Support Systems	2
1.3. Need of spatial computer modelling	3
CHAPTER 2: LITERATURE REVIEW	6
2.1. Introduction	6
2.2. GIS environment	7
2.3. Characteristics of spatial data	10
2.3.1. Maps	10
2.4. Spatial data modelling	11
2.5. Importance of GIS for spatial modelling	13
2.5.1. Data management in GIS	13
2.6. Data analysis in GIS	15
2.6.1. Methods of data input	17
2.6.2. Data editing	17
2.6.3. Re-projection, transformation and generalization	17
2.6.4. Map overlay (integrating data)	20
2.6.5. Buffering and neighborhood functions	23
2.6.6. Features of Microsoft Excel 2000 for spatial modeling	24
2.6.7. Features of MS Visual Basic and MS Access	25
CHAPTER 3: MATERIALS AND METHODS	26
3.1. Introduction	26
3.2. Model development	26

3.2.1. Features of Microsoft Excel 2000 for GIS	26
3.2.2. Logic formulation	27
3.2.3. Data collection	29
3.2.4. Data transfer	29
3.2.5. Development of raster model	29
3.2.6. Overlaying	37
3.2.7. Buffering	39
3.3. Result and discussion	43
3.3.1. Paddy productive area map	43
3.3.2. OFC productive maps	44
3.3.3. Overall productive map	45
3.3.4. Space availability for agriculture	46
3.3.5. Marketing facility map	47
3.3.6. Available productive area map	48
3.3.7. Productive area with marketing facility	49
3.3.8. Newly identified Paddy potential areas	50
3.3.9. Overlaid buffering maps	53
CHAPTER 4: PACKAGE DEVELOPMENT	57
4.1. Introduction	57
4.2. About AISB	57
4.3. Program logic	57
4.4. Data collection	59
4.5. Package development	59
4.5.1. Package handling	60
4.5.2. User interfaces	60
4.5.3. Programme codes	60
4.5.4. Database	60
4.6. Result and discussion	62
4.6.1. Land area in Batticaloa district	62
4.6.2. Land use pattern in Batticaloa district	63
4.6.3. Location and G.N division	65
4.6.4. Population Statistics	66
4.6.5. Water resource in Batticaloa district	66
4.6.6. Paddy cultivation	67
