ABSTRACT

This field research was conducted during the period of March 15, 2007 to September 17, 2007 in sector-03 of Kaluthawalai, Manmuni South Erruvil Pattu in Batticaloa district, in order to study the performance of chilli crop in farmers' field and analysing the production and marketing potential in sector-03 of Kaluthawali village.

Three farmer's fields were selected in Kaluthawali village and ten plants were selected randomly in each field. Totally 30 plants were selected for this study. Performance of chilli plants were observed under farmer's management practices. Recorded data and collected questionnaire data were analyzed in this study.

The data on canopy height, primary branch number, leaf length and leaf width, fruit width and fruit length, number of pods per plant and total yield were collected in this experiment and were statistically analyzed to determine the level of significance. The selected plant of PC variety in this study showed significant variation ($p < 0.05$) in growth parameters such as canopy height at 50% flowering, canopy height at 1st harvesting and canopy height at 3rd harvesting, primary branch number, fruit weight and fruit length.

The correlation studies revealed that some characters studied were positively correlated: they were canopy height and yield per plant; primary branch number and yield per plant; fruit length and yield per plant; fruit width and yield per plant; some other characters were negatively correlated: they were days to flowering and canopy height; days to fruiting and primary branch number; fruit width and fruit length and days to fruiting and fruit weight.

By and large; it is clearly seen that selected plant of PC variety showed a wider variation in several traits of agronomic importance and hence, selection would be positively approached for particular characters and these specific measures use in

chilli improvement programme, although yield and adaptability are the first and foremost criteria.

Farmer's details, cultivation information of Kaluthawali-3 village, market potential and traders and consumer information were analyzed in this study. From the farmers point of view the major problem faced by them was the market price fluctuation. Farmers were cheated by traders by the reason of low purity level of chilli crop.

Considering the result in general, it can be suggested that a genotype similar to PC variety is suitable for Batticaloa district. Farmers faced problem in marketing due to variation in fruit quality with respect to colour, shape, size, etc. Crop improvement program in present variety is a need to rectify the defects in order to encourage production, productivity and market potential.

LIST OF TABLE	XI
LIST OF FIGURES	XII
LIST OF PLATES	XIII
LIST OF PLATES	XIV
CHAPTER 1	1
1.0 INTRODUCTION	1
1.1 General description of Chilli (<i>Capsicum annum</i>)	1
1.2 Chilli (<i>Capsicum annum</i>) cultivation in Sri Lanka	2
1.2 Economic importance	3
1.2.1 Nutritional importance	3
1.2.2 Medicinal importance	4
1.3 General descriptions of genus capsicum	4
1.4 Objectives of the study	6
CHAPTER 2	8
2.0 REVIEW OF LITERATURE	8
2.1 Crop history	8
2.2 Taxonomy of Chilli	9
2.3 Botany of chilli	10
2.3.1 Leaves	10

2.3.2 Branching	11
2.3.3 Root	11
2.3.4 Flower	11
2.3.5 Fruit	12
2.3.6 Seeds	14
2.4 Growth stages of crop	14
2.4.1 Vegetative phase	14
2.4.2 Reproductive phase	15
2.5 Crop ecology	15
2.6 Genetics of <i>Capsicum</i>	16
2.7 Breeding of chilli	16
2.8 Pollination and fruit set	19
2.9 Cultivars of <i>Capsicum annum</i>	19
2.10 Chemical composition of chilli	19
2.11 Importance of Chilli	20
2.12 Management practices	22
2.12.1 Nursery Management	22
2.12.2 Land Preparation	23
2.12.3 Planting	23
2.12.4 Fertilizer Application	23
2.12.5 Irrigation	23
2.12.6 Weed Management	23
2.13 Pest and disease of chilli	24
2.13.1 Mites (<i>Polyphagotarsonimus latus</i>)	24
2.13.2 Aphids (<i>Aphis gossypii</i> & <i>Myzus persicae</i>)	24

2.13.3 Thrips (<i>Scirtothrips dorsalis</i>)	24
2.13.4 Whitefly (<i>Bemisia tabaci</i>)	25
2.13.5 Cut worm (<i>Spodoptera exigua</i>)	25
2.13.6 Caterpillar (<i>Helicoverpa armigera</i>)	25
2.13.7 Anthracnose disease	25
2.13.8 Chilli leaf curl complex	26
2.14 Chilli cultivation in Sri Lanka	28
2.14.1 Extent of chilli cultivation in Sri Lanka	29
2.13.2 Extent of chilli cultivation in Batticalo district	30
2.14 Recommended chilli cultivars in Sri Lanka	30
2.14.1 Chilli cultivar MI - 1	30
2.14.2 Chilli cultivar MI - 2	31
2.14.3 Chilli cultivar KA - 2	31
2.14.4 Chilli cultivar Arunalu (BL - 39)	32
2.14.5 Chilli cultivar MI-HOT	33
2.15 Improvement programme of chilli in Sri Lanka	33
CHAPTER 3	36
3.0 MATERIALS AND METHODS	36
3.1 Location of the experiment	36
3.2 Experimental variety of chilli	38
3.3 Experimental field selection	38
3.4 Chilli plants selection for data collection	38
3.3 Experimental field designing	38
3.4 Measurement and Observation	40
3.4.1 Stem colour	40

3.4.2 Nodal anthocyanin (Whole plant)	40
3.4.3 Plant growth habit	40
3.4.4 Branching habit	41
3.4.5 Branch number	41
3.4.6 Canopy height	41
3.4.7 Leaf colour	41
3.4.8 Leaf shape	41
3.4.9 Mature leaf length	41
3.4.10 Mature leaf width	41
3.4.11 Days to flowering	42
3.4.12 Number of flowers per axil	42
3.4.13 Number of flower per plant	42
3.4.14 Flower position	42
3.4.15 Corolla colour	42
3.4.16 Anther colour	42
3.4.17 Calyx margin	42
3.4.18 Calyx annular constriction	42
3.4.19 Days to fruiting	42
3.4.20 Fruit colour at intermediate stage	43
3.4.21 Fruit set	43
3.4.22 Fruit colour at mature stage	43
3.4.23 Fruit shape	43
3.4.24 Fruit length	43
3.4.25 Fruit width	43
3.4.26 Fruit weight	43

3.4.27 Fruit shape at pedicel attachment	43
3.4.28 Fruit shape at blossom end	43
3.4.29 Fruit surface	44
3.4.30 Seed colour	44
3.4.31 Total yield	44
3.5 Questionnaire survey	44
3.7 Statistical analysis	44
CHAPTER 4	45
4.0 RESULTS AND DISCUSSION	45
4.1 Analyzing of quantitative characters	47
4.1.1 Canopy height	47
4.1.2 Primary branch number	49
4.1.3 Days to flowering and Days to fruiting	50
4.1.4 Leaf length	51
4.1.5 Leaf width	51
4.1.6 Fruit length	52
4.1.7 Fruit width	53
4.1.8 Fruit weight	53
4.1.9 Yield of mature green pods per plant	55
4.2 Analyzing of qualitative characters	56
4.2.1 Stem colour	56
4.2.2 Nodal anthocyanin	57
4.2.3 Plant growth habit	57
4.2.4 Branching habit	58
4.2.5 Leaf colour	58

4.2.6 Leaf shape at mature plant	58
4.2.7 Number of flowers per axil	59
4.2.8 Flower position	59
4.2.9 Corolla colour	60
4.2.10 Anther colour	60
4.2.11 Calyx margin	60
4.2.12 Calyx annular constriction	60
4.2.13 Fruit colour at intermediate stage	61
4.2.14 Fruit colour at mature stage	61
4.2.15 Fruit shape at pedicel attachment	62
4.2.16 Fruit shape at blossom end	62
4.2.17 Fruit surface	63
4.2.18 Fruit shape	63
4.2.19 Fruit set	64
4.2.20 Seed colour	64
4.3 Questionnaire analyzing	64
4.3.1 Analyzing of cultivation practices and framers information	65
4.3.1.1 Farmers information	65
4.3.1.2 Cultivation information	65
4.3.2 Analysing of green chilli traders	68
4.3.3 Analyzing of green chilli consumer	69
