ABSTRACT

The main purpose of this research is to find out the level of influence of related variable on sugarcane Cultivation in sevanagala. The main objectives of this study are to find out the level of influence of product Quality on sugarcane Cultivation, to examine the level of influence of government policies on sugarcane Cultivation., to determine the level of influence of cultivation method on sugarcane Cultivation, to find out the level of influence of price offer on sugarcane Cultivation, determine the level of influence of transportation on sugarcane Cultivation

The survey was conducted to gather primary data by selecting 100 farmers from sevanagala divisional secretariat and that data was analyzed using mean value, standard deviation, percentages, bar charts. The evidence given by the mean value analysis too showed that mean value of product quality , price offer , transportation , government policies, and cultivation method and more indicators take less than 3.5 midpoint value in a 5 point likerd scale shoeing there is an influences of related variable on sugarcane Cultivation.

According to previous studies successfully integration of related variable is the prerequisite for superior sugarcane Cultivation. To test this assertion, this study looks into the nature of mean value of related variable its indicators in sugarcane production.

Key Variables: Product quality, Price offer, government policies, transportation, cultivation method,
