ABSTRACT

Presently drinking water has become a critical global issue. In Ampara district, with tropical climate and long dry season which creates a greater demand for safe drinking water. The district is rural and primarily agricultural, relying on a large irrigation network of reservoirs and canals for farming. However, there are water quality and scarcity issues with the traditional water sources due to intensive farming and resultant fertilizer, soil and chemical run-off. It was also found that consumption of unsafe water creates a negative impact on health such as diarrheal and renal calculi problems. In order to improve the health status of the people residing in these areas, there is a vital need to study the existing status of drinking water and to estimate their willingness to pay for safe drinking water. This study was conducted to assess the household willingness to pay for safe drinking water in Ampara District. This study was done in 120 households in three D.S. Divisions viz., Navithanveli, Pottuvil and Thirukkivil of Ampara district. Contingent Valuation method was used for valuation.

Results revealed that average age of head of household was 40.7 years and the mean family size of a household was 4.7 persons. The average household income was Rs 23,142 per month. The average household expenditure was Rs 21,233 per month. About 68% of household used unsafe drinking water and 48% households were affected by diarrheal disease due to the consumption of unsafe drinking water. Households spent Rs.624/month for treating water related diseases. Majority (55%) of households were using well water for their daily use. 46% of households used water with good quality but the use of excellent quality water was very low (1%) at household level. Majority of respondents in Navithanveli D.S. Division used poor quality water (62%) compared to Pottuvil and Thirukkivil.

Multiple linear regression analysis was used to determine the factors that influence Willingness to Pay of households for safe drinking water. The mean willingness to pay of households was Rs. 134.17/month. The result showed that Age and availability of water throughout the year were significantly and negatively influences the value of household willingness to pay and Samurdhi recipient was significantly and positively influence the value of willingness to pay. The mean willingness to pay of households was Rs. 134.17 per month. While the minimum and maximum willingness to pay of the households was recorded to be only Rs 50.00/month and Rs 350.00/month respectively. From the result it's recommended that households must be educated with proper water purification methods and awareness on importance of safe drinking water. And it is recommended to improve the water supply system in Ampara district.

TABLE OF CONTENTS

ABSTRACT.....	I
ACKNOWLEDGMENT.....	III
TABLE OF CONTENTS.....	V
LIST OF TABLES	IX
LIST OF FIGURES	XI
ABBREVIATIONS	XII
CHAPTER 1	1
1.0 INTRODUCTION	1
1.1 Background.....	1
1.2 Problem statement.....	4
1.3 Objective of the Study	6
CHAPTER 02	7
2.0 LITERATURE REVIEW	7
2.1 Water.....	7
2.2 Water Resources on Earth.....	7
2.3 Current state of water in the world	8
2.3.1 Water as a resource	9
2.4 Safe drinking water	9
2.5 Current status of access to safe drinking water world wide.....	10
2.6 The importance of safe drinking water	11
2.7 Impact of Access to safe drinking water	12
2.8 Health effect of unsafe drinking water.....	13
2.9 Water resource in Sri Lanka	14

2.9.1 Overview.....	14
2.9.2 State of Water Quality in Sri Lanka.....	15
2.10 Improved water source (Percentage of population with access) in Sri Lanka....	15
2.11 Water and health in Sri Lanka	16
2.12 Challenges in water sector Sri Lanka.....	17
2.13 Features in water supply and sanitation in Sri Lanka	18
2.14 Developments in safe drinking water facilities in Sri Lanka	19
2.15 Contingent Valuation Method.....	20
2.16 Willingness-to-pay and evidence of estimation for safe drinking water	21
CHAPTER 3	26
3.0 RESEARCH METHODOLOGY.....	26
3.1 Study area.....	26
3.1.1 Ampara District.....	27
3.1.2 Navithanveli D.S. Division.....	27
3.1.3 Thirukkivil D.S.,Division.....	27
3.1.4 Pottuvil D.S. Division.....	28
3.2 Selection of sample	28
3.3 Data collection	28
3.4 Data Analysis	29
3.5 Model Specification	30
CHAPTER 4	31
4.0 RESULTS AND DISCUSSION	31
4.1 Socio demographic and economic profile of households	31
4.2 Household level information.....	33
4.3 Water borne diseases.....	33
4.3.1 Response rate of water related diseases in each D.S. Divisions	34

4.4 Household water use	35
4.4.1 Household usage of different water sources for different purpose	36
4.4.2 Characteristics of water.....	37
4.5 Major problems faced in consumption of water	38
4.6 Safe drinking water usage of households.....	39
4.6.1 Purification methods used to treat the water	39
4.6.2 Reasons of not using any water purification methods	40
4.6.3 Water availability in surveyed areas	41
4.6.4 Water availability in surveyed areas (Comparing three D.S. Divisions)	41
4.6.5 Month of scarcity for water consumption	42
4.6.6 Payment for consumption of water	42
4.6.7 Response of the complaints made in relation to water problem	43
4.7 Opinion of household members on water from water supply	43
4.7.1 Water supply at household level	44
4.7.2 Number of Hours of water needed from water supply per day	44
4.7.3 Different uses of water from water supply	45
4.7.4 Acceptance of rate of water	46
4.8 Household willingness to pay for safe drinking water.....	46
4.8.1 How much willing to pay for safe drinking water	47
CHAPTER 5	50
5.0 SUMMARY AND CONCLUSIONS	50
5.1 Summary	50
5.2 Conclusions.....	52
5.3 Recommendations.....	53
