## ABSTRACT

Due to increasing rate of population the food availability is limited and farmers are adopting different farming systems to meet the demand. But sustainable and successful management of resources for agriculture to satisfy changing human needs, without degrading the environment or the natural resources is lacking. Therefore, this study was conducted at Agronomy farm, eastern university during October to December, 2017 to study the impact of organic, natural and conventional farming systems on physical and chemical properties of soil and also to evaluate the soil fertility status of the same.

Three different farming systems were practiced in randomized complete block design with five replications and fifteen plots were labelled. To find out the most suitable farming system, waruni variety of cowpea was selected and grown. Period from 2<sup>nd</sup> week to 5<sup>th</sup> week the growth parameters such as plant height, leaf number, branch number, days to fifty percentage flowering were observed and recorded. The yield parameters such as pod number and pod weight were observed and recorded. Initial and end (60 days after planting) soil samples were collected and soil properties such as bulk density, particle density, porosity, electrical conductivity, organic matter content, and microbial activity were analyzed. All the experimental data were analyzed statistically with Duncan Multiple Range Test (DMRT) at 5% significant level by using SAS 9.1 application statistical package. Analyzed growth parameters and soil physical and chemical properties were compared among those three farming systems.

Natural farming had improved in growth performance, physical and chemical properties of soil compared to other two farming systems where the low level of bulk density and particle density were found as  $1.1331 \text{ g cm}^{-3}$ ,  $2.4715 \text{ g cm}^{-3}$  and high level of plant height, leaf number, branch number, pod number, pod weight per plot, porosity,

electrical conductivity, organic matter content and microbial activity were found as 39.556cm, 23, 7, 261.4, 176.646g, 54.1503%, 67.2 $\mu$ s, 5.9871% and 87.3491 mg CO<sub>2</sub>/1g soil respectively.

Moreover, natural farming system was found to have better improvement than organic and conventional farming system in above growth parameters, physical and chemical properties of soil. This study also showed that the natural farming system improves the soil properties with minimum negative impact on the environment.

# TABLE OF CONTENTS

ABSTRACT.....	i
ACKNOWLEDGEMENTS.....	iii
TABLE OF CONTENTS.....	iv
LIST OF TABLES.....	vii
LIST OF FIGURES.....	viii
CHAPTER ONE .....	1
1.0 INTRODUCTION.....	1
CHAPTER TWO .....	7
2.0 LITERATURE REVIEW .....	7
2.1 Soil Fertility .....	7
2.1.1 Need for improving soil fertility.....	9
2.2 Farming systems in the world.....	9
2.3 Farming systems in Sri Lanka.....	11
2.4 Conventional farming system .....	14
2.4.1 Advantage of conventional farming system .....	14
2.4.2 Disadvantage of conventional farming system.....	15
2.4.3 Impact of conventional farming on soil property .....	16
2.4.4 Impact of conventional farming on food quality .....	17
2.4.5 Impact of conventional farming on environment.....	18
2.5 Organic farming system .....	18
2.5.1 Advantage of Organic farming system.....	19
2.5.2 Disadvantage of Organic farming system .....	20
2.5.3 Organic farming and continuous supply of food to meet demand .....	21
2.6 Natural farming system.....	22
2.6.1 Advantage of Natural farming system .....	23
2.6.2 Disadvantage of Natural farming system.....	24
2.6.3 Impact of Natural farming on soil property .....	24
2.7 Cowpea .....	24
2.8 Importance of different farming system on physical properties of soil .....	25
2.8.1 Bulk density.....	25
2.8.2 Particle density.....	27
2.8.3 Porosity .....	28

2.9 Importance of different farming system on chemical properties of soil.....	29
2.9.1 pH.....	29
2.9.2 Electric Conductivity .....	30
2.9.3 Microbial Activity .....	31
2.9.4 Organic matter content .....	32
CHAPTER THREE .....	33
3.0 Materials and Methodology .....	33
3.1 Experimental site .....	33
3.2 Variety.....	33
3.3 Treatment .....	33
3.4 Experimental Design .....	33
3.5 Field Layout.....	34
3.6 Plot Size.....	34
