## ABSTRACT

Globally, there is a lack of knowledge about solid waste generation and composition in rural areas because these types of studies have been conducted mainly in big cities. This leaves the local authorities without information to properly plan its operations. Environmental and other public health problems are associated with the generation of solid waste and is considered to be affected by the socio economic status of the household. For the effective planning of solid waste management, it is essential for us to know the quantity of waste generation and its composition. In this context, an evaluation study was carried out at Kolavil-01 (GN Division- AV 16) of Alayadivembu Divisional Secretariat Division, Ampara District to determine the household solid waste generation and composition based on field survey and to determine the relationship between the socio economic factors and waste generation. Questionnaire surveying covered 100 households in study area. Finally, data was analyzed using Microsoft Excel and SPSS.

The results showed that the total household waste generation per day was ranging from 0.35 kg to 3.41 kg with an average of 1.665 kg. The average amount of household biodegradable, plastic, polyethylene, metal and glass wastes were 1.374 kg, 0.067 kg, 0.031 kg, 0.128 kg and 0.064 kg per day respectively. Generation of biodegradable waste was higher than other types of waste while the generation of polyethylene waste was lower. In addition, biodegradable wastes contributed nearly 82.54% (by weight) of the total waste generation while plastic, polyethylene, metals and glass wastes contributed 4.04%, 1.87%, 7.72%, 3.84% respectively. Further, it has been proven statistically that the household waste generation shows positive correlation with family

# TABLE OF CONTENTS

ABSTRACT .....	i
ACKNOWLEDGEMENT .....	iii
TABLE OF CONTENTS.....	iv
LIST OF TABLES .....	ix
LIST OF FIGURES .....	x
LIST OF ABBREVIATION.....	xi
CHAPTER ONE .....	1
INTRODUCTION.....	1
1.1 Objectives.....	3
CHAPTER TWO .....	4
LITERATURE REVIEW.....	4
2.1 Sources of solid waste.....	4
2.2 Categories of solid waste.....	5
2.2.1 Municipal solid waste.....	5
2.2.2 Agricultural waste .....	6
2.2.3 Industrial waste.....	6

2.2.4 Construction demolition waste .....	7
2.2.5 Hazardous wastes .....	8
2.2.6 Bio medical wastes .....	9
2.3 Characteristics of municipal solid waste.....	9
2.3.1 Physical Properties of Waste.....	9
2.3.1.1 Density.....	9
2.3.1.2 Moisture Content.....	10
2.3.1.3 Particle Size and Distribution.....	10
2.3.1.4 Field Capacity.....	10
2.3.1.5 Permeability of Compacted Wastes.....	11
2.3.2 Chemical Properties of Waste .....	11
2.3.2.1 Proximate Analysis.....	11
2.3.2.2 Fusing Point of Ash.....	11
2.3.2.3 Elemental Analysis.....	11
2.3.2.4 Essential Nutrients.....	12
2.4 Solid waste characterization.....	12
2.5 Municipal solid waste management.....	13
2.6 Functional elements of solid waste management.....	15

2.6.1 Solid waste generation .....	16
2.6.1.1 Factors influencing solid waste generation .....	18
2.6.1.2 The impact of socio economic factors on solid waste generation and composition .....	21
2.6.2 On-site handling, processing and storage.....	23
2.6.2.1. Storage Containers.....	24
2.6.3 Collection .....	24
2.6.4 Sorting, processing and transformation of solid waste.....	25
2.6.5 Transportation to disposal sites .....	26
2.6.6 Disposal.....	27
2.7 Solid waste management in Sri Lanka .....	27
2.8 The problems of solid waste management in Sri Lanka .....	29
<b>CHAPTER THREE .....</b>	<b>32</b>
<b>MATERIALS AND METHODS .....</b>	<b>32</b>
3.1 Description of Study area.....	32
3.2 Sampling method .....	33
3.3 Data collection .....	33
3.4 Data Analysis .....	33

<b>CHAPTER FOUR.....</b>	<b>35</b>
<b>RESULTS AND DISCUSSION .....</b>	<b>35</b>
4.1 Household waste generation and composition .....	35
4.1.1 Biodegradable waste generation.....	38
4.1.2 Plastic waste generation .....	39
4.1.3 Polyethylene waste generation .....	40
4.1.4 Metallic waste generation.....	41
4.1.5 Glass waste generation .....	42
4.2 Relationship between socio economic factors and waste generation.....	42
4.2.1 Relationship between age of head of the family and waste generation.....	42
4.2.2 Relationship between educational level of head of the family and waste generation .....	44
4.2.4 Relationship between family income and waste generation .....	45
4.2.5 Relationship between family size and waste generation .....	46
<b>CHAPTER FIVE.....</b>	<b>48</b>
<b>CONCLUSIONS AND SUGGESTIONS.....</b>	<b>48</b>
5.1 Conclusions .....	48
5.2 Suggestions .....	48
