## ABSTRACT

The following is the feasibility research regarding the re-construction of the Tile Factory in Oddusuddan in Northern Province owing to the war which prevailed for the last 20 years. This factory was organized in the year 1968 and in the year 1972 it came under the direct administration of the government as one of the nine other Ceramic Corporations. As at present the environmental situation is normal and a peace solution is in progress and re-habilitation and re- construction is going on there a possibility of re-starting and re- constructing this factory to as earlier situation is possible.

The most fundamental things to be observed are building, modern machineries, new technologies, power and water, a skilled and un-skilled labor force and raw materials. Specialized training in the modern methods and quicker methods of out put, and propaganda should be observed at a grand way. Transportation such as railway-high way with a heavy loading capacity with better road ways and electricity are very important facilities to maintain to carry on. Also a very high standard of quality in the manufacture must reflect in the various product manufactured in the factory.

If all these things could be maintained in a proper and scientific way, no doubt that this program will achieve to success, and will be a source of income to all who have involved including the consumers.

If all these things must come to a successful position, the government will all also take full interest and co-operate in this matter to a higher level.
