ABSTRACT

The main objectives of the study are standard of farmers in Mannunai South Eruvil Pattu Divisional Secretary Division. This study was conducted with view of socio and economics aspects.

Simple random sampling method was used to select the samples with the ratio of sampling to paddy cultivation farmers. Further information was gathered by discussing with Agrarian Service Officer, Agricultural Instructor, Divisional Secretary and Planning Assistant, and Representatives of the farmers.

The research findings reveal that the paddy production in this region is now facing several constraints, related to financial, marketing, labor management and technology.

The recommendations are the officers concerned to solve the problem to get seed paddy at particular period, the government have to take action for economical stability, create the transportation facilities, increasing service, increasing investment, the water supply have to give time period, the water manager must be appointed agriculture department give incentives to the farmers the government take action to develop irrigation tanks and the soil should experimentation. In addition, Government, Non Government Organization, and Farmers should come forward to modify the paddy cultivation.
