## ABSTRACT

Today corporate world people spend more time in their offices or work places rather than their homes, especially in banking sector most of employees spend their time in bank office rather than their home. So starches, shape, and design of the office influence employees' productivity of the work, so this study aims to find what is the impact of interior design on employees' productivity in private and state commercial banking sectors in Kurunagala district.

In this study got 150 sample from private and state commercial banks employees in Kurunagala district (75 employees from Private commercial banks and 75employees from State commercial banks). Primary data was collected using structured questionnaire, five point likert scale questionnaires are distributed among, bank managers, bank officers, bank executives and bank trainees.

Five dimensions of office interior design were used to this, they are Furniture, Noise, Temperature, Lighting, and spatial arrangements

Collected data evaluated by using Statistical Package for Social Sciences (SPSS 19) And the statistical techniques used such as Descriptive Statistics, Correlation and Regression analysis to find out the impact of interior design on employees' productivity.

This is comparative study, this study compared with Kurunagala district, government commercial banks and private commercial banks.

Both banking sectors have high level of office interior design and high level of employees' productivity.

Both state sector and private sector commercial banks in Kurunagala district have positive relationship with office interior design and employees' productivity and Results showed that interior design has positive association with employees' productivity.

When concern impact in state sector commercial banks, office interior design all dimensions are significantly impact on employees' productivity. In private commercial banks all office interior design dimensions are significantly impact on employees' productivity without temperature.
