

DEVELOPMENT OF GELATIN FREE YOGHURT USING
Cyclea peltata LEAF GEL

ABSTRACT

A laboratory experiment was conducted at the Department of Agricultural Chemistry, Faculty of Agriculture, Eastern University, Sri Lanka to investigate the physical and chemical properties of *Cyclea peltata* leaf gel and develop gelatine free yoghurt using *Cyclea peltata* leaf gel

Physical parameters of *C.peltata* leave and its gel were determined to assess the quality characters of *C.peltata* leaf gel. The average value of leaf length, diameter and weight were 10 to 15 cm, 6 to 8 cm and 0.5 to 0.7 g respectively. The colour of the gel was dark greenish and was translucent in appearance. Fresh gel was viscous having slimy consistency. Chemical analysis of leaf gel revealed that *C.peltata* leaf gel had moisture of 72.6% while, ash and pH were 0.06 per cent and 4.85 respectively. Leaf gel contains 0.24 per cent protein. In addition it contains 16.48% crude fibre. The gel was extracted by grinding the *Cyclea peltata* leaves. There were four recipes for four treatments of yoghurts prepared incorporating different levels of *Cyclea peltata* leaf gel per one litre of yoghurt mix (0, 4, 6 and 8.g). The amount of gelatine in the control yoghurt was 6 gL⁻¹ with 0 gL⁻¹ *Cyclea peltata* leaf gel. The other ingredients were used in similar proportions in all treatments and there were four treatments in this study vz: T₁ – 6g of Gelatine added yoghurt (use as control), T₂ – 4g of leaf gel added yoghurt, T₃ – 6g of leaf gel added yoghurt, T₄ – 8g of leaf gel added yoghurt. The experiment was laid out with completely randomized design, with three replications. All four treatments of freshly prepared yogurts were analysed for Nutritional Qualities and Organoleptic Qualities. The Nutritional Qualities vz: pH, Moisture, Ash, Titratable Acidity, Fat, Protein, Crude Fibre and Total Solid Content were analysed

according to AOAC (2002) methods. The Nutritional Qualities such as pH, moisture, titratable acidity, fat, protein and total solid content were no difference ($p>0.05$) among the treatments. But only crude fibre was significantly difference ($p<0.05$) among treatments. Organoleptic Qualities of four treatments of freshly made yogurts V_z: appearance, colour, aroma, taste and overall acceptability were evaluated through the panel of 20 members. T₃ (6 g leaf gel L⁻¹ of yoghurt mix) had the highest score, mean value 8.7 in a nine point hedonic scale in appearance, colour, aroma, taste and overall acceptability and control treatment (T₁) had next best level. T₄ (8 g leaf gel L⁻¹ of yoghurt mix) got the lowest score 4.5 of the overall acceptability.

Based on the above results, T₁ and T₃ treatments were kept for storage study in a refrigerator for 15 days. Nutritional and Organoleptic Qualities of these two treatments (T₁ and T₃) were analysed at 4 days interval for 15 days. The nutrient qualities (pH, moisture, titratable acidity, fat, protein, total solid) were not significantly different ($p>0.05$) between treatments with 6 gL⁻¹ of leaf gel and control except for crude fibre content. A slight decrease in pH and moisture but, slight increase in titratable acidity, fat, protein and total solid content, considerable increase in crude fibre was noticed in both 0gL⁻¹ and 6gL⁻¹ of *C.peltata* leaf gel incorporated yoghurt products during storage period of 15 days (T₁ and T₃). Results of Organoleptic characteristics revealed that, treatment with 6 gL⁻¹ of leaf gel (T₃) had the highest mean score of overall quality of all sensorial properties namely, appearance, colour, taste, aroma and overall acceptability and the control treatment (T₁) had next best level after 15 days of storage in a refrigerator. Based on these results, T₃ treatment with 6 gL⁻¹ of leaf gel was selected as the best treatment. Thus, it can be concluded that *Cyclea peltata* leaf gel can be used to replace gelatine in yoghurt preparation completely.

TABLE OF CONTENTS

Title No.	Page No.
ABSTRACT	I
ACKNOWLEDGMENT	III
TABLE OF CONTENTS	VI
LIST OF TABLES	XII
LIST OF FIGURES	XIV
ABBREVIATIONS	XV
CHAPTER 01	1
1.0 Introduction	1
CHAPTER 02	4
2.0 Literature review	4
2.1 <i>Cyclea peltata</i> (Lam.) Hook. f. &Thoms	4
2.1.1 Physical characters of <i>Cyclea peltata</i>	4
2.1.2 Physico - Chemical constituents of <i>Cyclea peltata</i>	7
2.1.3 Uses of <i>Cyclea peltata</i>	9
2.2 Milk	10
2.2.1 Current position of dairy in Sri Lanka	11
2.2.2 Definition of milk	12
2.2.3 Composition of milk	12
2.2.3.1 Fat	14
2.2.3.2 Protein	14
2.2.3.3 Casein.....	15
2.2.3.4 Lactose	15

2.2.3.5 Solid Not Fat (SNF)	16
2.2.3.6 Total Solids (TS)	16
2.2.4 Coagulation	16
2.3 Yoghurt	16
2.3.1 What is Yoghurt.....	16
2.3.2 History of Yoghurt.....	17
2.3.3 Manufacture of Yoghurt.....	17
2.3.3.1 Standardization of milk	17
2.3.3.2 Homogenization of milk	18
2.3.3.3 Fermentation.....	18
2.3.3.4 Addition of Stabilizer	19
2.3.3.5 Starter culture	19
2.3.3.6 Starter culture organisms	20
2.3.3.6.1 Streptococcus thermophiles (ST)	20
2.3.3.6.2 Lactobacillus bulgaricus (LB)	20
2.3.4 Nutritional composition of yoghurt	20
2.3.4.1 Lactose	22
2.3.4.2 Protein	22
2.3.4.3 Whey protein	23
2.3.4.4 Other nutritional elements	23
2.3.5 Basic principle of Yoghurt	24
2.3.6 Yoghurt production steps	25
2.3.7 Requirement for high quality Yoghurt	26
2.3.8 Benefits of yoghurt	26

CHAPTER 03	27
3.0 Methodology	27
3.1 Location and study area	27
3.2 Materials	27
3.3 Experiment 01 – Physico chemical analysis of <i>Cyclea peltata</i> leaf gel	27
3.3.1 Preparation <i>C.peltata</i> leaf gel	27
3.3.2 Analysis of <i>C.peltata</i> leaf gel	28
3.3.2.1 Determination of ash content	28
3.3.2.2 Determination of dry matter content	28
3.3.2.3 Determination of pH	28
3.3.2.4 Determination of protein	29
3.3.2.5 Determination of crude fibre	31
3.4 Experiment 02 - Analysis of Nutritional and Organoleptic Qualities of Freshly Prepared Yoghurt using <i>Cyclea peltata</i> leaf gel	33
3.4.1 Treatment plan	33
3.4.2 Mother culture preparation	33
3.4.3 Preparation of yoghurt	34
3.4.4 Analysis of yoghurt	36
3.4.4.1 Determination of ash content	36
3.4.4.2 Determination of dry matter content	36
3.4.4.3 Determination of fat content	37
3.4.4.4 Determination of titratable acidity of yoghurt	37
3.4.4.5 Determination of pH	38
3.4.4.6 Determination of protein	38

3.4.4.7 Determination of crude fibre	40
3.4.5 Analysis of organoleptic qualities of yoghurt	41
3.5 Experiment 03_- Storage Studies of yoghurt produced using <i>Cyclea peltata</i> leaf gel	42
3.6 Statistical analysis	42
CHAPTER 04	43
4.0 Results and Discussion	43
4.1 Experiment 01 - Physico-Chemical Analysis of <i>Cyclea peltata</i> leaf gel	43
4.1.1 Physical characters of <i>C.peltata</i> leaves	43
4.1.2 Chemical composition of <i>C.peltata</i> leaves	44
4.1.3 Chemical attributes of fresh cow milk	44
4.2 Experiment 02 - Analysis of Nutritional and Organoleptic Qualities of Freshly Prepared Yoghurt using <i>Cyclea peltata</i> leaf gel	46
4.2.1 Nutritional qualities of fresh yoghurt manufactured with different concentrations of <i>Cyclea peltata</i> leaf gel at day one	46
4.2.2 Organoleptic qualities of freshly made yoghurt using <i>C.peltata</i> leaf gel	47
4.3 Experiment 03 - Storage Studies of yoghurt prepared using <i>Cyclea peltata</i> leaf gel	49
4.3.1 Changes in Nutritional Qualities of Yoghurt during Storage	50
4.3.1.1 Changes of the pH of treatment yoghurts and control during the storage period	50

4.3.1.2 Changes of the Titratable Acidity of treatment yoghurts and control during the storage period	51
4.3.1.3 Changes of the Fat content of treatment yoghurts and control during the storage period	52
4.3.1.4 Changes of the Ash content of treatment yoghurts and control during the storage period	53
4.3.1.5 Changes of the Moisture content of treatment yoghurts and control during the storage period	53
4.3.1.6 Changes of the Protein content of treatment variation in yoghurt during storage period	54
4.3.1.7 Changes of the Crude fibre content of treatment yoghurts during the storage period	55
4.3.1.8 Changes of the Total solid content of treatment yoghurts during the storage period	56
4.3.2 Changes in Organoleptic Qualities of Yoghurt during Storage	57
4.3.2.1 Sensory attributes variation on 4 th day of storage period	57
4.3.2.2 Sensory attributes variation on 8 th day of storage period	58
4.3.2.3 Sensory attributes variation on 12 th day of storage period	59
4.3.2.4 Sensory attributes variation on 15 th day of storage period	61
4.3.2.5 Overall quality of the experimental yoghurt 15 th day storage in a
