ABSTRACT

Dividend policy is one of the important factors that affect share return. Dividend policy is measured by dividend per share, dividend yield and dividend payout. The purpose of this paper is to analyze the impact of dividend policy on stock return of the non-financial companies listed in Colombo Stock Exchange. The Purposive Sample comprises of 36 non-financial companies from six sectors of Colombo Stock Exchange covering a time span from year 2014 to 2018. Non-financial sectors selected for this study include Beverage Food and Tobacco, Manufacturing, Chemicals and Pharmaceuticals, Health care, Power and Energy and Motors. Data has been collected from annual reports of companies. Statistical Package Stata 15.0 has been used to analyze and evaluate panel data using descriptive statistics, Fixed and Random Effect. Finally, Hausman test was used to select the appropriate model to explore the impact of dividend policy on stock return.

This study follows the fixed effect model. In order to explore the impact of independent variables and stock return, three hypothesis have been developed and tested. A positive impact is found for dividend per share, while there is a negative impact between dividend yield and stock return. The impact of dividend payout is deemed to be insignificant. In addition it is shown that firm size, asset growth and long term debts explain changes to share return. The study supports the fact that dividend policy is relevant with stock return for the non-financial companies listed in Colombo Stock Exchange.

This research shows new insights for policy makers to improve the performance of Colombo Stock Exchange.

Keywords: Dividend per Share, Dividend Yield, Dividend Payout, Share Return, Colombo Stock Exchange
