EASTERN UNIVERSITY, SRI LANKA

THIRD YEAR FIRST SEMESTER EXAMINATION IN AGRICULTURE - 2001/2002 ACH - 3101 APPLIED SOIL CHEMISTRY

Answer	all	questions.	
Allswei	all	questi	ons.

Time allowed: 3 Hrs.

Answers should be written in English.

- 1. a. Briefly discuss the different types of acidity in soils.
 - b. "The pH of the soil solution is only the tip of the iceberg in determining how much lime is needed to neutralize an acid soil". Comment.
- 2. a. Enumerate the possible electrochemical changes that could occur in a flooded soil.
- b. Briefly explain how these changes could influence the nutrient availability of the submerged soil.
- 3. Write an account on the environmental pollution caused by the modern agricultural practices and give suitable remedial measures to counteract them.
- 4. a. What do you understand by the term Cation Exchange Capacity (CEC) of a soil and explain the factors affecting it.
 - b. "Higher the exchange capacity of a soil, the greater its buffer capacity, other factors being equal". Interpret the above statement.
- 5. Write short notes on the following.
 - a. Significance of C:N ratio in soil fertility.
 - b. Role of soil in green house effect.
 - c. Reclamation of alkaline soils.
- 6. "Productivity of the soil is largely influenced by it's micro fauna and micro flora". Critically analyze the above statement.
