## THIRD EXAMTNATION IN SCIENCE - 2005/2006

## FTRST SEMEESTER (Aug./SEP.,2007)

MT 305 - OPERATIONAL RESEARCH (Proper \& Repeat)

Answer all questions
Time : Two hours

Q1. (a) Define the "feasible region for a linear programming problem".
(b) Explain how do you find the optimal solution in the graphical method.

A mine company own two different mines $A$ and $B$ that produce an ore which, after being crushed, is graded into three classes: high, medium and low-grade. The company has contracted to provide a smelting plant with 12 tons of highgrade, 8 tons of medium-grade and 24 tons of low-grade ore per week. The two mines have different operating characteristics as detailed below :

|  | Cost per day <br> Mine | Production (tons per day) |  |  |
| :---: | :---: | :---: | :---: | :---: |
| A | 180 | High | Medium | Low |
| B | 160 | 6 | 3 | 4 |

Assuming 5 working days per week, how many days per week should each mine be operated to minimize the total operating cost, fulfilling the smelting plant contract?

Q2. Explain the method of selection of a pivot element in the simplex method.

Use Simplex Method to solve the following linear programming problem: Minimize $Z=3 x_{1}+8 x_{2}$, subject to the constraints:

$$
\begin{aligned}
x_{1}+x_{2} & =200 \\
x_{1} & \leqslant 80 \\
x_{2} & \geqslant 60, \quad x_{1}, x_{2} \geqslant 0
\end{aligned}
$$

Q3. Use Revised Simplex Method to solve the following linear programming prol Minimize $Z=-4 x_{1}+x_{2}+2 x_{3}$, subject to the constraints:

$$
\begin{aligned}
2 x_{1}-3 x_{2}+2 x_{3} & \leqslant 12 \\
-5 x_{1}+2 x_{2}+3 x_{3} & \geqslant 4 \\
3 x_{1}-2 x_{3}=-1, \quad x_{j} & \geqslant 0, \quad j=1,2,3 .
\end{aligned}
$$

The following identities may help you in your computation.

$$
\begin{aligned}
& \left(\begin{array}{ccc}
1 & 0 & 2 \\
0 & 1 & 3 \\
0 & 0 & 2
\end{array}\right)^{-1}=\left(\begin{array}{ccc}
1 & 0 & -1 \\
0 & 1 & -3 / 2 \\
0 & 0 & 1 / 2
\end{array}\right),\left(\begin{array}{ccc}
1 & -3 & 2 \\
0 & 2 & 3 \\
0 & 0 & 2
\end{array}\right)^{-1}=\left(\begin{array}{ccc}
1 & 3 / 2 & -13 / 4 \\
0 & 1 / 2 & -3 / 4 \\
0 & 0 & 1 / 2
\end{array}\right) \\
& \left(\begin{array}{ccc}
2 & -3 & 2 \\
-5 & 2 & 3 \\
-3 & 0 & 2
\end{array}\right)^{-1}=\left(\begin{array}{ccc}
4 / 17 & 6 / 17 & -13 / 17 \\
1 / 17 & 10 / 17 & -16 / 17 \\
6 / 17 & 9 / 17 & -11 / 17
\end{array}\right) .
\end{aligned}
$$

Q4. ABC Enterprizes is having three plants manufacturing dry-cells, located at diffe locations. Production cost differs from plant to plant. There are five sales office the company located in different regions of the country. The sales prices cand from region to region. The shipping cost from each plant to each sales office other data are given by following tables:

Production Data Table

| Production cost per unit | Max. capacity in No. of unts | Plant No. |
| :---: | :---: | :---: |
| 20 | 150 | 1 |
| 22 | 200 | 2 |
| 18 | 125 | 3 |

Shipping Costs Table

|  | Sales office | Sales office | Sales office | Sales office | Sales office |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1 | 2 | 3 | 4 | 5 |
| Plant 1 | 1 | 1 | 5 | 9 | 4 |
| Plant 2 | 9 | 7 | 8 | 3 | 6 |
| Plant 3 | 4 | 5 | 3 | 2 | 7 |

## Demand \& Sales Prices

|  | Sales office | Sales office | Sales office | Sales office | Sales office |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1 | 2 | 3 | 4 | 5 |
| Demand | 80 | 100 | 75 | 45 | 125 |
| Sales Price | 30 | 32 | 31 | 34 | 29 |

Find the production and distribution schedule most profitable to the company.

Q5. Enumerate the steps involved in solving maximization assignment problems.

An organization producing 4 different products A, B, C and D having 4 operators $\mathrm{P}, \mathrm{Q}, \mathrm{R}$ and S , who are capable of producing any of the four products, works effectively 7 hours a day. The time (in minutes) required for each operator for producing each of the product are given in the cells of the following matrix along with profit (Rs. per unit):

|  | Product |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Operator | A | B | C | D |
| P | 6 | 10 | 14 | 12 |
| Q | 7 | 5 | 3 | 4 |
| R | 6 | 7 | 10 | 10 |
| S | 20 | 10 | 15 | 15 |
|  |  |  |  |  |
| Profit (Rs./unit) | 3 | 2 | 4 | 1 |

Find out the assignment of operators to products which $W_{15}$ naximize the profit.

Q6. Find the maximum flow for the following network by
(a) Intuitive technique,
(b) Labeling technique.
