EASTERN UNIVERSITY, SRILANKA
DEPARTMENT OF MATHEMATICS

SECOND EXAMINATION IN SCIENCE - 2009/2010
'FIRST' SEMESTER (June. /July., 2011)
OC 206 - Java Programming
a) Explain the following terms used in Java program:
i. editor;
ii. compiler;
iii. class;
iv. method.
b) Explain briefly, why Java language is popular.
c) Briefly explain what is meant by the syntax and the semantics of a programming language. Give an example to illustrate the difference between a syntax error and a semantic error
d) List all primitive data types in Java.
e) Show the output of the following program:

```
public class Numbers {
    public static void main(String[ ] args) {
        int n = 5;
    double num = 2.0;
    double denom = 2.0;
    double pi = 0.0;
    for (int i = 0; i<=n; it+) {
        pi += num/denom;
            num = -2;
            denom }+=2\mathrm{ ;
        }
        pi = pi * 4;
System.out.println("After " + n + " iterations: pi = " + pi);
    }
}
```

2. 

a) Find the value of the following Boolean expressions. Which are illegal statemer Assume that in each case, $x=5, y=10$, tim=true, fred=false.
i. $(x+2)<y$
ii. x||tim
iii. $\mathrm{y}<$ fred
iv. $(x+=5) \& \&(y==8)$
v. !(fred $\| \mid x>=5)$
b) Write and run a program that uses a while loop to compute and print the sum of a given nur of squares. For example, if 5 the is input, then the program will print 55 , which equals $1^{2}+2$ $3^{2}+4^{2}+5^{2}$
c) Write a program to find the factorial values of the first 15 integers.
d) How to declare an array in Java? Write a program to store the following number sets two dimensional array and to calculate and display the sum of the elements in eacht and column.

$$
\{5,7,6,4\},\{3,5,7,9\},\{4,9,11,14\}
$$

3. 

a) Explain the following terms used in Java program:
i. accessors;
ii. mutators;
iii. constructor.
b) Explain the concept of garbage collection in Java. When is the garbage collector caller
c) Explain the concept of packages in Java. How are they used?
d) Explain the Java terms super and this.
e) Write a program to calculate the area of rectangle and triangle abstract classe.
4.
a) List any four sorting algorithms.
b) Draw the picture that will be produced by the following paint () method:

```
public static void paint(Graphics g) {
    for (int i=10; i <= 210; i= i + 50)
        for (int j = 10; j <= 210; j = j + 50)
                g.drawLine(i,10,j,60);
    }
```

c) Suppose you would like an applet that displays a green square inside a red circle, as illustrated. Write a paint () method that will draw the image.

d) Write the following Java applet and associated HTML file:

Applet Viewer: Circleclass.class
Applet
Enter radius of circle: 4.2 Gol Area: $\sqrt{55.41769}$ Circumference: 26389378

Applet started.
Where the user enters a value for the radius of a circle whose corresponding area and circumference values are calculated and displayed automatically when the "Go" button is pressed according to the following formulae:

$$
\begin{aligned}
& \text { Area }=\pi r^{2} \\
& \text { Circumference }=2 \pi r
\end{aligned}
$$
