

## EASTERN UNIVERSITY, SRI LANKA

 DEPARTMENT OF MATHEMATICS SPECIAL REPEAT EXAMINATION IN SCIENCE - 2007/2008 THIRD YEAR FIRST AND SECOND SEMESTER (Feb., 2010) MT 305 - OPERATIONAL RESEARCHAnswer all questions

## Time: Three hours

Q1. (a) Define the "feasible region for a linear programming problem".
(b) Explain how do you find the optimal solution in the graphical method.

Water Ltd. has two products Drought and Flood. To produce one unit of Drought, 3 units of material A and 1 unit of each material B and material C respectively are required. To produce one unit of Flood, 1 unit of each material A and material B respectively and 2 units of material $C$ are required. Not more than 40 units of material C can be used and at least 27 units of material A must be used and the use of material B in total should be equal to 21 . The selling price per unit of Drought and Flood are Rs. 16 and Rs. 8 respectively. The manufacturing cost per unit of Drought and Flood are Rs .8 and Rs. 4 respectively. Formulate Mathematical model for this problem and solve it for minimum cost.

Q2. Use simplex method to solve the following Linear Programming Problem: Maximize $Z=2 x_{1}+3 x_{2}+4 x_{3}$, subject to the constraints:

$$
\begin{aligned}
3 x_{1}+x_{2}+4 x_{3} & \leqslant 600 \\
2 x_{1}+4 x_{2}+2 x_{3} & \geqslant 480, \\
2 x_{2}+3 x_{2}+3 x_{3} & =540, x_{1}, x_{2}, x_{3} \geqslant 0 .
\end{aligned}
$$

Q3. Use Revised Simplex Method to solve the following linear programming problem:
Minimize $Z=-4 x_{1}+x_{2}+2 x_{3}$, subject to the constraints:

$$
\begin{aligned}
2 x_{1}-3 x_{2}+2 x_{3} & \leqslant 12 \\
-5 x_{1}+2 x_{2}+3 x_{3} & \geqslant 4 \\
3 x_{1}-2 x_{3} & =-1, \quad x_{1}, x_{2}, x_{3} \geqslant 0 .
\end{aligned}
$$

Q4. Briefly explain the Vogel's approximation method.
A company has four factories situated in four different locations in the country and fo sales agencies located in four other locations in the country. The cost of production ( $R$ per unit), the sale price (Rs. per unit), the shipping cost (Rs. per unit) in the cells matrix, the monthly capacities and the monthly requirements are given below:

| Factory | Sales Agency |  |  | Monthly |  | Costo |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1 | 2 | 3 | 4 | Capacity (units) | Producti |
| A | 7 | 5 | 6 | 4 | 10 | 10 |
| B | 3 | 5 | 4 | 2 | 15 | 15 |
| C | 4 | 6 | 4 | 5 | 20 | 16 |
| D | 8 | 7 | 6 | 5 | 15 | 15 |
| Monthly requirement | 8 | 12 | 18 | 22 |  |  |
| Sales price | 20 | 22 | 25 | 18 |  |  |

Find the monthly production and distribution schedule which will maximize profit.
25. Enumerate the steps involved in solving minimization assignment problems.

A machine operator processes five types of items on his machine each week (weekdays only), and must choose a sequence for them. The set-up cost per change depends on the item presently on the machine and the set-up to be made, according to the following table:

|  | To item |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Form item | A | B | C | D | E |
| A | - | 4 | 7 | 3 | 4 |
| B | 4 | - | 6 | 3 | 4 |
| C | 7 | 6 | - | 7 | 5 |
| D | 3 | 3 | 7 | - | 7 |
| E | 4 | 4 | 5 | 7 | - |

If the operator processes each type of item once and only once each week, how should he sequence the items on his machine in order to minimize the total set-up cost?

Q6. Find the maximum flow for the following network using:
(a) intuitive technique,
(b) labeling technique.
